```

Lets you pay rent, education fees, and professional service charges directly using your credit card instead of cash or bank transfer.

Users can send money directly to a bank account to pay for rent, tuition, and professional services—quickly, securely, and efficiently.

Available on both Play store/App Store as well as Web App

user.

Arya
30, Software Engineer
Bangalore - IN

- Lives in a rented apartment
- Salary credited mid-month
- Comfortable with credit cards but cautious about fees

initial.

Arya has to pay rent 1st of every month, but his salary gets credited mid month.
A friend suggest him to try spaid app.

Arya opens up his phone to install the spaid app which allows to
maintain the cash flow during the interest free period of his credit card.

He checks through the Play store reviews about the app

★☆☆☆☆ December 31, 2025

As a new customer, I tried logging in and received a message saying "You are on the waitlist." There is no explanation anywhere in the app. Customer care was clueless and simply said it would resolve automatically, which sounds unprofessional and unreliable. This raises serious concerns about the app's onboarding process and support quality. Not a good sign for new users.

★☆☆☆☆ January 6, 2026

Spaid support team - I did a payment yesterday an amount of Rs. 48000/-, still it's not credited into receiver account, but deducted from my account. However I tried to connect customer care, but there is no proper channel to speak. Need more improvement to provide customer support. Worst experience and pathetic service to resolve the issues. Still my issue not resolved and trying to get in touch with the team. But no luck Complete disappointed this time and bad service

★☆☆☆☆ January 23, 2026

My payment has not settled for more than 72 hours. Spaid neither settled my transaction nor returned my amount. I have mailed many times. No customer care number to connect the app. they are using our money by showing payment failed courses and settled after seven days. Last time they settled my account after seven days. please beware of this App and never transfer from this app. it's true Now again it's been more than three days and payment is deducted and settled till now. beware this App .

★☆☆☆☆ December 28, 2025

poor customer support, amount is debited but not paid to the receiver Serious issue with payments. Two separate transactions of ₹30,085 each were debited from my Axis bank credit card, but the receiver never got the money. One shows "in progress" and the other "settled - pending confirmation" even after hours. Customer support is not responding at all. If money gets stuck, there's no help. can I get any response from customer care

★☆☆☆☆ January 5, 2026

Poor customer support. A serious issue with payments. ₹5,000 was debited from my ICICI credit card, but the receiver never received the money. The payment status is showing "In Progress" and pending confirmation. Customer support is not responding at all. If money gets stuck, there is no proper help or resolution. pls I want to refund my money. Please use this service carefully

★☆☆☆☆ January 10, 2026

This app is really disappointing. It asks for too many sensitive permissions like location access, permission to read and send SMS, and even Aadhaar authentication. That's way too much personal information for a basic service. On top of that, there's no option to continue without giving these permissions, which feels intrusive and unsafe. Privacy should come first, and this app clearly doesn't respect that.

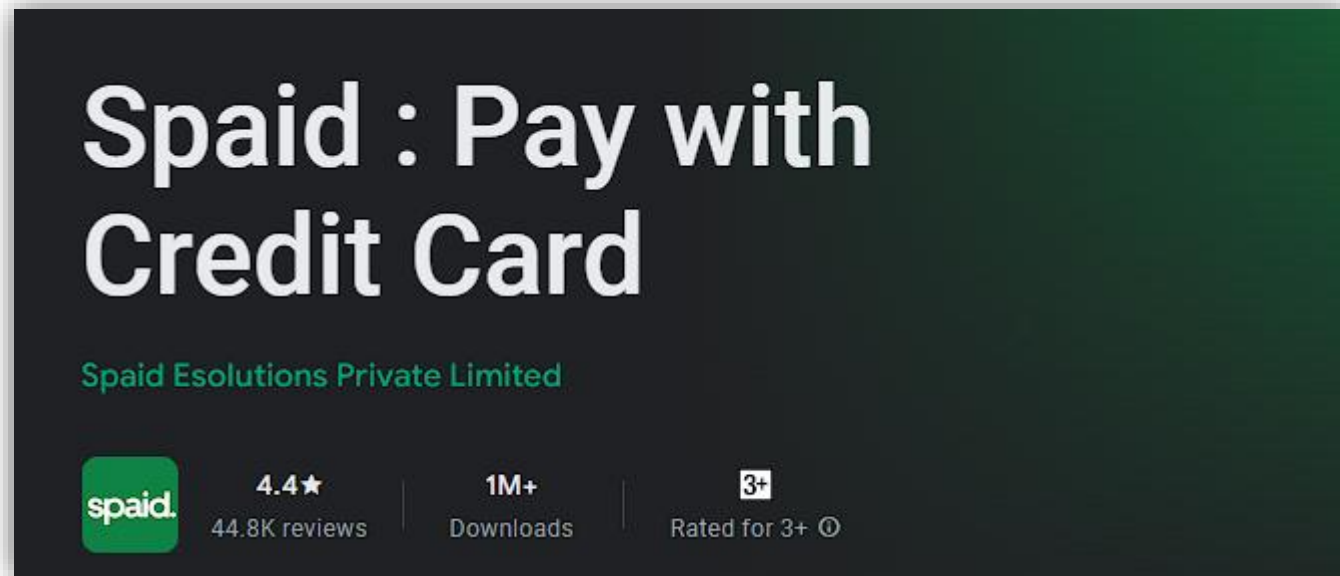

.3

- Most of the recent reviews reports for failed-stuck transactions i.e, payment is deducted from Credit Card but did not reach the recipients.
- Multiple transaction failures without proper reasons/progress – Creates confusion
- As most of the users might be doing transaction for last minute bill payments or similar emergencies, This creates a big panic situation for the user.
- Many other reviews pointed a poor customer support, not responsive enough, longer wait times Or unrealistic resolution times.
- Some reviews suggest for a discrepancy in the final charge as the interest rate is not properly displayed When the user is in payment procedure.
- There are many 1-star ratings in both App store/Play store which are recent.

.4

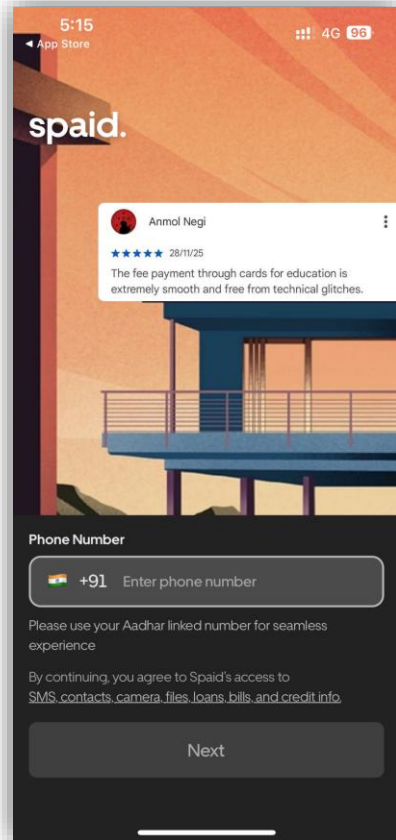

Arya proceeds to check social media for the product reviews

- Reddit/Instagram/Facebook/Youtube – All have a similar feedback
- But nevertheless, Arya proceeds to install the application in desperation

ui analysis.

Login Screen

Creates two major confusions

1. Why is there 5-Star rated reviews shown predominantly on login page when the user just noticed dozens of negative ratings just before app was installed.
2. SMS and other permissions was not highlighted and can be left unnoticed by users.

.1

Discrepancy between system and real world

- The login page displays 5-star testimonial suggesting a flawless experience, while real-world reviews indicate operational issues.
- Creates a mismatch between user expectation and lived experience as this is a selective, not representative approach
- Expectation gaps lead to emotional backlash in reviews even though it's a marketing strategy

Recommendation:

Replace individual testimonials with honest, aggregate signals or show the app purpose

“Trusted by 1M+ users for rent & fee payments.”

.2

User Control and Security

- Users must agree to broad permissions (SMS, contacts, camera, files, loans, bills, credit info) without granular control.
- Forced permissions lead to privacy risks.
- Missing trust badges or privacy notices

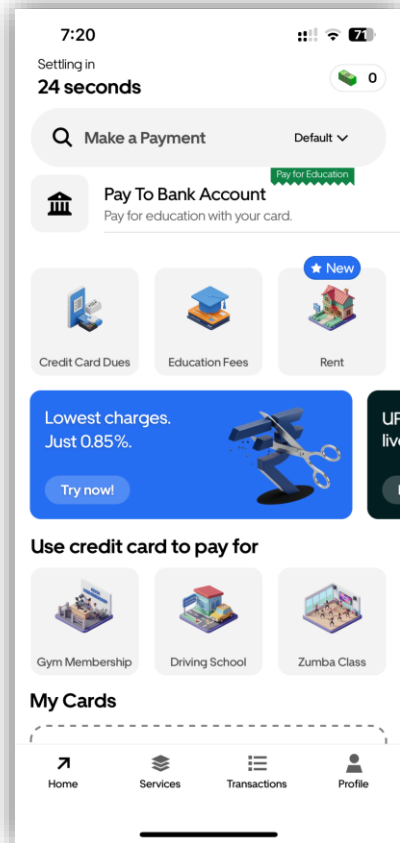

Recommendation:

Ask for minimal permissions upfront(and Why) and Defer sensitive access until feature use

RBI / partner bank badges or Familiar onboarding patterns

ui analysis.

Home Page

Feature-rich but UX-confused home page

.1

Settling in 24 Seconds(Dynamic)

- For a first-time user, they gets wondered reading this header, as there is no active transaction happening.
- They even question about this, “What is settling?”, “Is my Money already gone?”, “I did not initiate anything!”
- This is a Premature Feedback (system talking too early), feedback should always follow the action.
- As most of the real-world reviews complaints about the time it takes to settle a payment, showing this upfront creates more panic and irritation also triggers financial anxiety instantly.

Recommendation:

If this part has to be added, then show the real time stats i.e., show only after a payment is initiated

“Most payments settle within 30 seconds” or a real time progress bar

2

Too many Buttons

- I found out that most buttons lead to the SAME backend flow (Pay to User/ Pay to Bank) but are shown as different features.
- Press Rent/Gym/Search/Bank → (Enter beneficiary → Enter amount → Pay via card)
- Choice overload without real difference.
- Make a Payment(Search Bar) = Pay to Bank Account(Button). Why have both next to each other when both does same thing.

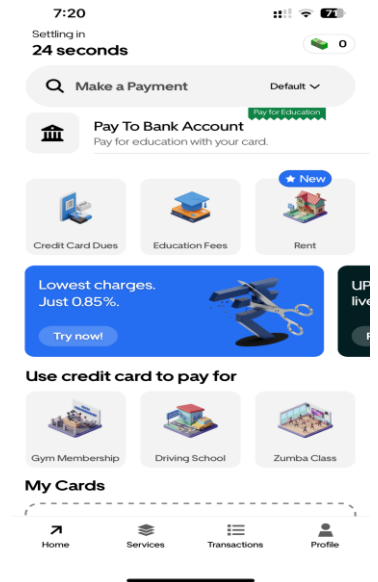

Recommendation:

Make home screen Action-first, category-second, marketing-third

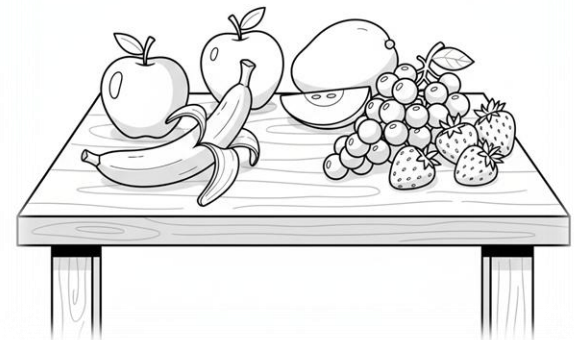

Delete the Search Bar/Pay to Bank Account and replace with one button

Pay Anyone.

Give all these extra buttons in Services tab.

**WHICH OF THESE
IS A FRUIT?**

.3

My Cards is displayed the bottom most part as least important when cards are

- The funding source
- Core to every payment

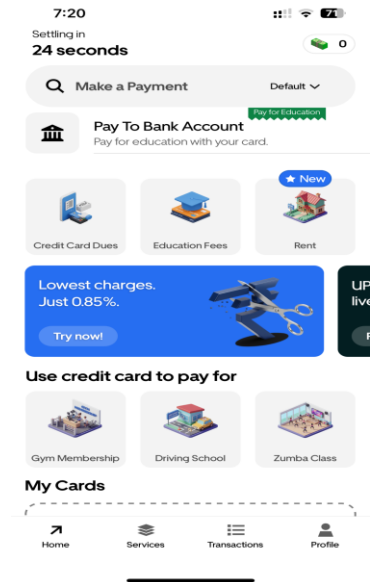

There are also some ads which are too eye-catching and prominent.

Recommendation:

Move the My Cards section upwards, just below the Pay Anyone button.

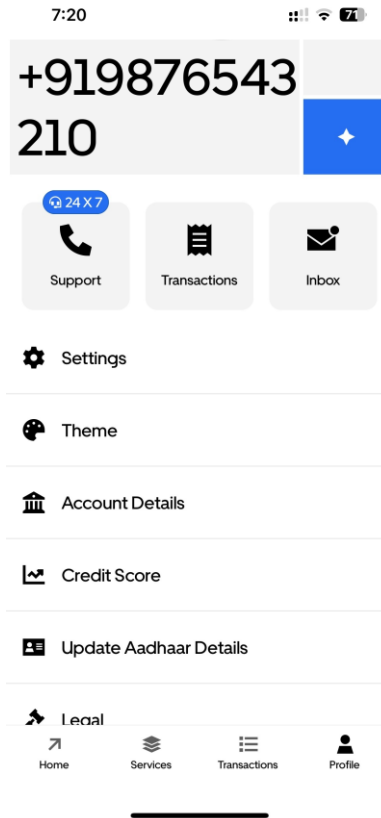

Instead of all the shortcuts scattered, group it and collapse to sections.

Reduce the ad size(visually too dominant) – personal preference.

ui analysis.

Profile

“Thou shall call me +919876543210”
- Arya

.1

Phone number is visually overpowering(BOLD, LARGE, MULTILINE)

- It looks like the main purpose of the app is your number, not your account.
- This is more like a phone book contact card and not a profile dashboard.
- People expects them to be identified with their names not with their numbers
- There is no visible edit button for this Profile section.
- People expect an edit my profile option to add their name/photo and basic contact information.

Recommendation:

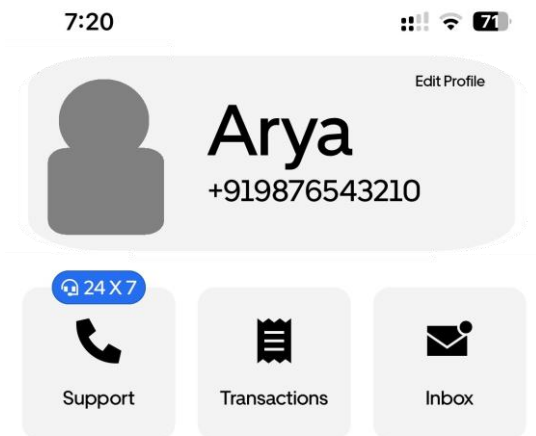

Make the Profile screen feel like “This is me and my account”.

Primary info should be Name and number should be secondary.

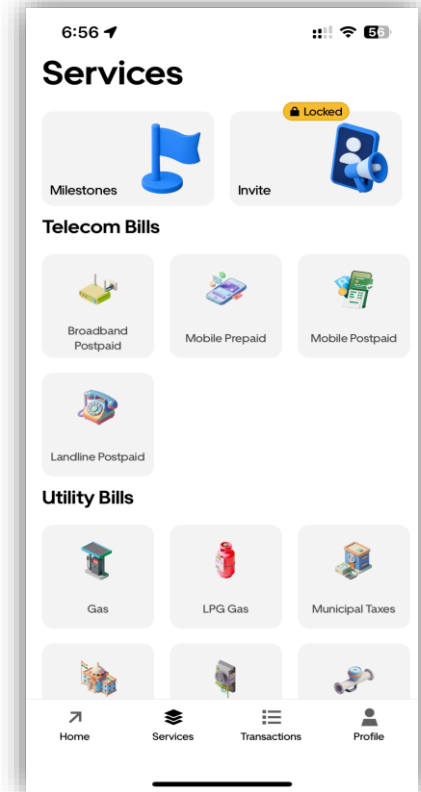

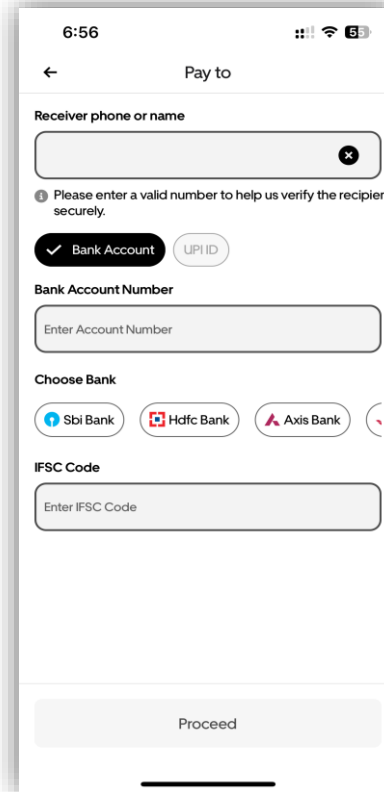

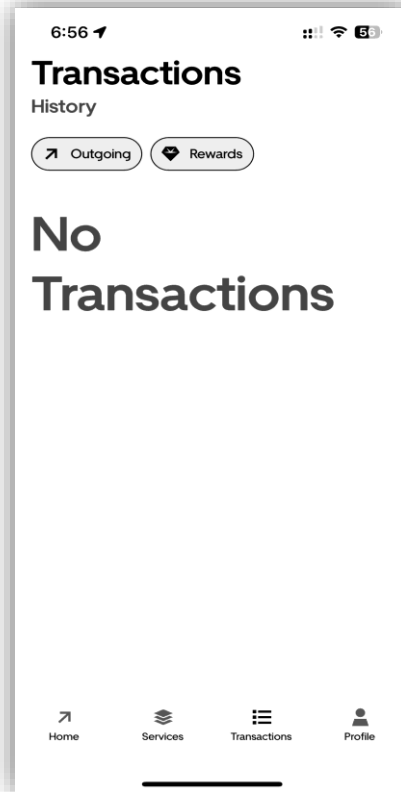

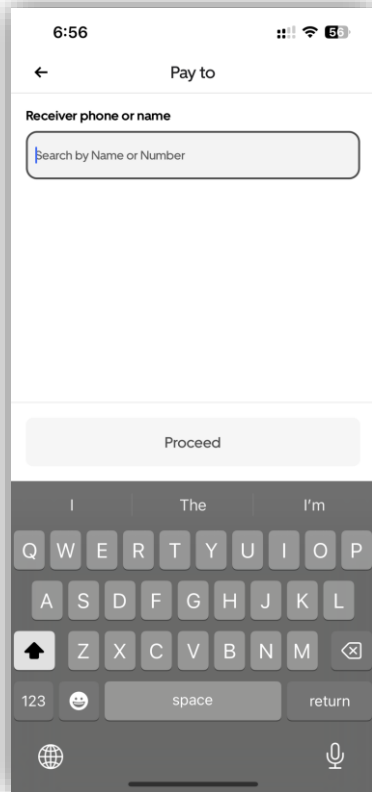

Make the Bold, Large, Multiline Number to be Normal, small and placed below the Name

There should also be an Edit Profile icon(Only if the app intends to give that ownership to user)

Also why is there an AI Button?

.other UI Screens

Other UI screens looks good to me with maybe few changes required,
I might be able to find out some if I start giving my card details and do some transfers

a thought.

Apart from the UI, I would like to highlight a few points
In meantime I checked the iOS version on Phone, Android version on tab
and Web version on laptop and I noticed some discrepancies between
the mobile app and web app.

I also noticed alignment issues in the tablet view of the app.

Additionally, I think there is a requirement for a good customer support system
Which is more transparent, and provide timely and effective resolutions to
Customers. The tickets raised by customers should be present in the app for the users
To view and should be able to track them.

I also suggest for the payment progress should be more transparent which provides
More clarified status to users rather than few words “Started”, “In Progress”, “Settled”

end.
